

Check your results on-line

At Hamilton laboratories, we understand how important is for our Customers easy access to test results. Our dedicated on line, web-based IT system offers an easy-to-use tool to obtain ongoing information on testing progress and test results.

Hamilton on-line service ensures:

- confirmation that your samples have been delivered to laboratory,
- status of sample check,
- access to in-process results before all analyses are completed,
- easy available archive files of tested samples and obtained results.

TESTING LABORATORIES

About us

The rapid industrialization, globalization and development of the world trade require professional evaluation and analysis of products and processes aimed at confirmation of their quality but also more frequently than ever at consumers safety and our environment.

J.S. Hamilton Poland Ltd. is an unique example of professional organization which combines independent inspection services with a wide spectrum of chemical and physical analysis carried out by own laboratories.

The name of J.S. Hamilton Poland Ltd. means not only professional approach to quality matters but also full impartiality and independence confirmed by relevant accreditations.

Our team of experienced analysts and experts ensure the highest standard of our services. Our own testing laboratories offer a wide scope of chemical, physical, microbiological and sensory analysis.

At present we are the leader in laboratory services in Eastern Europe.

Our laboratories offer

- Microbiological analyses of raw materials and final product
- Stability and challenge tests
- Dermatological test (evaluation of pro-allergic and irritant properties)
- Evaluation of application properties (customer testing)
- Safety assessment of cosmetic product
- Chemical, physical testing
- Evaluation of bactericidal activity of chemical disinfectants and antiseptics

We offer the full analysis required for checking the quality of cosmetic products to conform with European and international laws. Our service is part of a quality process to ensure safety, quality and finally the efficacy and claims' objectivation of cosmetics products.

Methodology

All studies are conducted according to GMP using internationally accepted methodologies and operating according to official guidelines (Colipa FDA, CTFA, EP).
